

REPORT
OF THE
BOARD OF ADMINISTRATORS,
OF THE
CHARITY HOSPITAL

TO THE
GENERAL ASSEMBLY OF THE
STATE OF LOUISIANA

1921

NEW ORLEANS

THE CHARITY HOSPITAL

OF LOUISIANA

WAS FOUNDED IN THE YEAR 1786

BY

DON ANDRES ALMONASTER Y ROJAS,

To whose generous endowment, the munificence of the
LEGISLATURE OF THIS STATE,and the liberality of the State of Pennsylvania, the community is indebted for
the means of erecting this edifice, built in the year

1832

His Excellency A. B. Roman, being Governor and Ex-Officio
President of the Institution.To record which and inscribe hereon the names and contributions of its
distinguished benefactors.

Annual Report of the Vice President

FRED W. EVANS

Governor John M. Parker, Ex-Officio President of the Board of Administrators, Charity Hospital of Louisiana, Baton Rouge, La.

Your Excellency:

With careful regard for, and despite the fact our appropriation falls short of actual requirements, we can unhesitatingly point to the past year as one of achievement in the Charity Hospital.

I have just read the Superintendent's Report, covering in minute detail the achievements of the past year, our present deficiencies, and contemplated improvements for the coming year, most of which must be held in abeyance until adequate funds are in hand.

In looking over the annual reports of the Vice-Presidents of former years, I am impressed with the fact that the urgent needs of former administrations are still the needs of this administration. For instance, former reports stress the importance of fire prevention. During the past year this has been corrected to the extent that one of the buildings has been equipped with an automatic sprinkler system. Four other buildings remain unequipped, and it is appalling to contemplate the consequences of a fire in these unequipped and antiquated buildings. This one equipment of automatic sprinklers that we have was the result of donations, and was not from the State's funds. Fire protection has been brought into the central area of the hospital grounds, which reduces our fire hazard, but does not in any sense give us the protection that the automatic sprinkler system would.

Extracts from the reports of former Vice-Presidents show that the needs that then existed still exist, in larger quarters for the internes, ample room for housing female help, and enough room to take care of our nurses. At present, many internes and nurses are quartered in the city, adjacent to the hospital, which entails an expense and brings about a condition which is not desirable.

Among the distinct achievements during the past year, covered in detail in the Superintendent's report, is the efficient X-Ray Department, now second to none in the South.

The milk supply of the hospital is now nearly 100% efficient, running very high in butter fat, and exceedingly low in bacteria count. This result has come about because of the demand the hospital makes upon the milk producers, and because of the fact that entirely new equipment has been added to the facilities of the hospital.

An inspection made by a committee from the American College of Surgeons at the hospital found that our case records were not up to standard. This was one of the reasons that kept us from Class A rating. This has been entirely corrected, and the patients' case records are now complete and meet the requirements of the American College of Surgeons and the American Hospital Association. This change not only is valuable in giving better service to the patients, but also is of great assistance to the Visiting Staff as a whole.

I would be remiss did I not take this opportunity to refer to the splendid organization of the Medical and Surgical Staff, and its co-operation with the Board of Administrators. During the year the Board members met several times with the staff and discussed problems affecting the patients and the institution which have already borne productive and lasting benefits. These meetings have cemented a cordiality upon the part of each for intelligent and active co-operation.

For many years the Social Service work of the hospital has been done, as far as it could be done, by two workers, assisted occasionally by volunteer workers. This department, I am told, was originated under the able management of many prominent ladies of New Orleans, who took a personal, energetic interest, and made splendid progress. Their organization disbanded during the past year and generously turned over to the Treasurer the sum of four thousand five hundred and thirty-four dollars and thirty-seven cents (\$4,534.37), and with four thousand and fifty dollars and ninety cents (\$4,050.90) raised by Sister Stanislaus at her May lawn party, gave us a new start. But it is not fair that the entire support of this department should devolve entirely upon the generosity of our friends. The City of New Orleans now appropriates the sum of two thousand dollars (\$2,000.00) per annum. It is our endeavor to have the ladies who originated this work reorganize as an auxiliary and arrange a plan whereby they could co-operate with and render the Board assistance of inestimable value.

I am deeply grateful to my co-workers on the Board, who have unselfishly given their time and earnest endeavor, which in my opinion represents a type of public service second to none.

I wish to commend Dr. Wm. W. Leake, Superintendent, for his able and efficient work during the period of his office. He has displayed rare judgment and excellent initiative.

To Mr. F. W. Matthews, who has for so many years filled the office of Secretary-Treasurer of Charity Hospital, I wish to extend my hearty appreciation for the competent manner in which he has, as usual, managed his office.

To Sister Stanislaus and her co-workers I feel it a privilege and great pleasure to express the assurance of my highest respect and appreciation of the splendid services rendered this institution and humanity in general. I also wish to point out the fact that the services of these fine women, which would amount in monetary value to thousands of dollars, is given freely, and with no cost to the State.

I recall many donations made to the hospital during the year, which are gratefully appreciated. The N. O. Lodge No. 30, B. P. O. E., who have each Christmas during the past several years, taken sole charge of the Christmas tree and distribution of toys in the Milliken Memorial Hospital for Children, justly deserve the many expressions of thanks heard on these occasions.

In conclusion, I refer you to the accompanying reports of the Superintendent and the Treasurer, which cover in detail all matters connected with the institution.

Yours respectfully,

(Signed) FRED W. EVANS,
Vice-President.

Superintendent's Report

To the Board of Administrators, Charity Hospital, New Orleans, La.
Gentlemen:—Herewith I submit to you my report for the year 1921:

BED CAPACITY OF HOSPITAL

White Male	332

This past year in retrospect gives us the first real opportunity for studying hospital administration and hospital problems as existed prior to the war. This war, with its unprecedented demands, so warped conditions, both physical and financial, that accurate comparisons were impossible. Charity Hospital suffered its share during this depression, but with its never-say-die spirit weathered the storm bravely, and is now in a position to take its proper rank.

Charity Hospital is a Class A institution, but constant work on the part of all will be necessary to keep it there. While diligent work and co-operation will play an important part, financial difficulties must also be overcome; for this we must look to our good State.

Statistics are usually dull, but let us glance briefly at our per capita cost. In 1919 it was \$1.37, in 1920, \$1.53, while in 1921 it was increased to \$1.61. Now let us compare with some other general hospitals. In 1920 the per capita cost at Cook County was \$3.29, and at Bellevue, \$3.30. In smaller institutions, the per capita cost was as high as \$5.00 and \$6.00 per day. It is self-evident, then, that no matter how efficient

your executive, and how efficient the heads of the various departments may be, how capable and diligent the Visiting Staff and House Officers, we cannot compare favorably with hospitals whose per capita cost is twice as much. And certainly our poor and unfortunate are just as deserving as those in other parts of the country.

Wherein do our deficiencies lie? We need additional wards for the proper housing of our sick. We need suitable interne quarters. We need additional space for the housing of our nurses. We are also sorely in need of adequate quarters for our help. We have 105 nurses; we should have twice as many. For the proper care of our patients, we should have an increased number of orderlies and help and a more efficient class.

Many improvements are contemplated, among which is an addition to the Clinic Building, consisting of a new three-story addition, thereby giving increased clinic space and confining all such cases to one building. It is also planned to have the Admitting Room, Accident Room and Record Room centralized.

For the past month, the various committees of the Board have worked most painstakingly with me on the budget for the next two years, and while we know the State will have many demands, we trust our entire budget will be granted, for we have asked only for that which we actually need.

The serious nursing problem, due to the great shortage of nurses in the past few years, has been overcome. I feel that nurses can now be obtained. Our present accommodations are full. We are, therefore, in need of additional quarters. During the past few months there has been an increase of over a hundred per cent in the pupil nurses, and the applicants show higher educational qualifications and promise to make more desirable nurses. The classes are well organized and the course of instruction is thorough and well planned. Sister Kostka, our new directress of nurses, is to be complimented upon the great stride she has made.

The Social Service Department made unusual progress during the latter part of 1921. As late as September in that year, we had but one paid worker and the services of one volunteer. During the past few months, three additional paid workers have been added, and we contemplate having a specially trained worker in the Admitting Room. It is obvious how great is the necessity of a Social Service Department in the hospital, and suffice it to say that it is indispensable. Much credit for the growth and success of this department must be given our Mr. Pfaff. His knowledge of such affairs and his unbounded enthusiasm have been a constant stimulus to us all. Closely allied to the Social Service is the Occupational Department which has been inaugurated in so many hospitals, and I trust we may develop such a department in the near future.

The Outdoor Department, under the direction of Miss Babb, has shown greater progress during the year 1921 than at any other time. The attendance of the visiting doctors has been much better and their work in general much improved. Much additional space is needed, additional clerical force is imperative, and much new equipment absolutely essential. As mentioned above, the contemplated addition to the clinic will obviate this deficiency.

To Sister Stanislaus, the directress in charge of the housekeeping department, must be given a vote of thanks for the masterly and efficient way she has conducted her department. Her intimate knowledge of the entire hospital, her timely suggestions, and her hearty co-operation at all times, have been a source of great satisfaction to me.

A recent inspection of the hospital by the City Board of Health showed us to be exceptionally clean and sanitary. In fact, to quote the words of the President, Dr. Callan: "If all the homes in New Orleans were in as good sanitary condition as this report indicates for the Charity Hospital, we should not be far from the ideal city."

The Department of Dietetics, under the able direction of Sister Alicia, has proven satisfactory, and has been a substantial aid to the Visiting Staff in properly working out diets for the sick.

The Pathological Department, under the leadership of Dr. Duval, has nearly doubled the work of the previous year. This department, in addition to the usual routine of a laboratory, maintains a Pasteur department, where treatment is given to all such cases. The laboratory also prepares and furnishes the hospital with all anti-tetanic and anti-diphtheretic sera. It is the hope of the department that a division be adequately outfitted for the making of complete blood chemistry.

The Purchasing Department, with Mr. Henry Weihmann at its head, has been very conscientiously administered, and has given very satisfactory service.

The Charity Hospital Sewing Guild, with Mrs. Harry L. Howard as its president, has been unusually diligent, and the work of these ladies, making garments for the patients, standard dressings, amputation sponges and other surgical dressings, has been of great benefit.

The Visiting Staff has been definitely organized, and with their subdivisions hold their clinical meetings monthly. Such meetings are not only instructive to the Staff, but are also essential to the proper administration of the hospital. The Executive Body, composed of chiefs of the various departments, also meets monthly, and much credit must be given them for their co-operation and suggestions in the administration of the hospital, and for their assistance in helping to outline the affairs and policies of the hospital.

During the year 1921 a distinct professional improvement was made in the election of two house medical officers, Dr. Emmett L. Irwin and Dr. Sam Hobson. The wisdom of this course cannot be estimated, and we wonder how we were able to get along without their services. These two officers, with the two house surgical officers, Dr. Peter Graffagnino and Dr. W. O'D. Jones, give us a resident house staff of four, and with our fifty resident internes and our two hundred members of the Visiting Staff, we are amply able to care for the professional needs of the hospital.

The Registration Department, under the able direction of Dr. G. Farrar Patton, has functioned in its usual efficient way, in spite of the cramped space in which it has been housed. If our plans mature, however, this defect will be remedied, and additional space will be allotted to the department. This will be a distinct advantage, not only to those working with the records, but the Visiting Staff and all those connected with the institution.

During the year, we were fortunate in having donated to us a Sanborn Basil-Metabolism outfit, and we are greatly indebted to Dr. H. P. Jones for his conscientious and untiring efforts in making readings on all patients sent to him.

The year 1921 was notable for the improvements made. Chief among these was the establishment of a new and complete X-ray outfit. This department, under the direction of Dr. Granger, meets the requirements of the hospital, and I am proud in the belief that our X-ray Department is second to none in this part of the country. We will soon have a new portable outfit where the necessary bedside plates can be made.

There are in the course of construction two new cystoscopic rooms and a bronchoscopic room, just opposite the X-ray Department. The advantage of the proximity of this department to the X-ray is self-evident.

Several distinct changes have been made in the Clerk's Office in order that this space may be more thoroughly utilized, and that the business of the office may be more competently managed.

A chart of the wards of the hospital has also been installed in the Admitting Room. From this chart one can see immediately, not only how

many beds there are in each ward, but also the number of beds occupied daily in each ward.

During the latter part of September, oil-burning equipment was installed in place of the old coal-burning furnaces. While we experienced some difficulty at first in the burning out of arches, it is believed now we have a proper setting, and the advantages of the oil over the coal are many. Besides being more economical to run and more cleanly, the oil-burning equipment gives a more uniform and efficient heat. At no time since the installation of this system has it been necessary to have in operation more than two of our four boilers.

A new laundry machine was purchased, which brought the efficiency of the laundry to a higher standard. This machine takes the place of three, two of which were in service twenty years. With the probable addition of two more machines, our laundry will be brought to the highest efficiency.

A new kitchen has been installed in the Milliken Building, which gives much better service, especially to the doctors and internes. The Nurses' Home has been entirely screened. Much plumbing has been put in the various buildings. The Delgado Memorial has been completely painted, as has been the first floor of the Main Building. The Milliken Memorial is now being painted.

An automatic sprinkler system has been installed in the Main Building, which brings our fire hazard in that building to a minimum, and has already substantially reduced the insurance premium. It is our hope and earnest desire that the other buildings will be sprinkled this coming year, for it is realized the danger that now exists.

A nurses' call signal was established in one of the wards as a test. This equipment is entirely satisfactory. As its installation is economical, it is hoped we will soon have the entire hospital installed with these calls.

We are indebted to Mrs. Cowles for an electric dishwasher, which greatly facilitates the work.

The hospital during the year was unfortunate in losing by death Mr. John Ponder, Chief Engineer. Mr. Ponder was an old landmark, having served the hospital faithfully for more than fifty years, and his loss is keenly felt. Mr. J. V. Ponder, his son, has been elected to succeed him, and I feel certain that he will make a worthy successor.

In conclusion, let me express my appreciation of those who have so kindly made donations to the hospital during the past year. These gifts have made it possible for us to give better care to our patients. I wish especially to thank the Board of Administrators for the confidence they have placed in me, and also for the untiring and enthusiastic work they have actually done. I am also grateful to the Visiting Staff, House Staff, internes, sisters, nurses, and all for their unlimited co-operation and their willing assistance in the administration of the affairs of the hospital.

Last, but not least, I wish to express my appreciation for the services of our Secretary-Treasurer, Mr. F. W. Matthews, whose aid has been most beneficial in helping me with my duties.

Respectfully submitted,

WM. W. LEAKE, M.D.,
Superintendent.

Report of Superintendent of Clinics

New Orleans, La., January 30, 1922.

DR. W. W. LEAKE, Supt.,
Charity Hospital of Louisiana.

Sir:

I have the honor to submit the following report of the Charity Hospital Out-Patient Department for the year 1921. During the year 33,851 new patients were admitted, 13,183 visits were made to the various clinics with a daily average of 361, as shown by the following table:

	New	Consultations	Total No. Visits
Surgical	9,474	25,440	34,914
Medical	5,708	8,032	13,740
G. U. Men. and Sal.	2,639	16,721	19,360
G. U. for Women	529	1,351	1,880
Gynecology	1,983	1,399	3,362
Pre-natal	890	1,444	2,334
Pediatrics	1,825	3,060	4,885
Neurology	525	1,438	1,965
Dermatology	1,312	1,472	2,784
Ear, Nose, Throat	4,164	3,880	8,044
Orthopedics	372	674	1,046
Eye	2,491	11,223	13,714
Hay-fever	174	1,833	2,007
Dental	1,765	1,365	3,130
Total	33,851	79,332	113,183

There is a decided increase over the previous year; an increase of 6,432 admissions, and in the total number of visits 16,956.

The highest number of admissions were to the surgical clinics, which had a combined admission of 9,474 new patients, with the total number of visits reaching 34,914. The first of August, we began to keep an account of the minor surgical operations performed in the surgical clinics. From August 1st through December 31st, 2,219 minor operations were performed, giving a monthly average of 443 and approximating for the year 5,316 minor operations. It is obvious 34,914 visits would indicate a large amount of work in this department.

The medical clinics have made satisfactory gains as shown by total visits of 13,740. New equipment has been added for special examinations in the treatment of gastro-intestinal diseases.

The ear, nose and throat clinic had the largest admission of the individual clinics, admitting 4,164 patients, and referring to the hospital for operation 1,099 patients. The eye clinics, with an admission of 2,491, referred 185 patients to the hospital for operation, and total number of visits reached the high mark of 13,714.

The number of admissions to the G. U. for men and salvarsan was 1,300 less than the previous year but, except in the surgical clinics, this clinic had the highest number of total visits, 19,360, due, doubtless, to a strict follow-up system. During the year 5,512 doses of arsphenamine were administered, 64 minor operations were performed, 167 microscopic examinations were made and 148 patients were referred to the hospital. All the other clinics made good progress and have continued to work in their usual satisfactory manner.

The number of tests made in the laboratory was 8,026, 5,260 being Wassermann tests. Though small in proportion to the new patients admitted, yet the laboratory work almost doubled that of last year, which was less than 5,000 tests.

From August 1st, 1921, to January 1st, 1922, 679 X-rays were made for the clinics, making the approximate number of X-rays for the year 1,632. This does not include the number of X-ray reports of accident cases referred to various surgical clinics.

Compressed air was put in the hay-fever clinic and new instruments have been supplied to meet the particular requirements of the various departments.

Although we are very sensible of a lack of needed equipment and more room, yet we feel that in no other department have more gratifying results been obtained. Aside from the relief given to the suffering poor, the economical value to the State is immense in reducing the number of admissions to the hospital, and permitting many patients successfully treated in the clinics to continue uninterruptedly their occupations.

HOSPITAL—SIX

421

In conclusion, we wish to express our very sincere appreciation and thanks to the clinic Visiting Staff for their devotion and loyalty and, on the whole, splendid record of attendance on their various clinics; to the social workers and nurses for their eagerness and efficiency; to all the employees for their sympathetic co-operation and helpfulness. Owing to the untiring efforts of all, many difficulties have been overcome and much more service has been rendered than could have been accomplished otherwise.

Respectfully,

SARA BABB,

Superintendent of Clinics.

Report of the Treasurer

To the Board of Administrators, Charity Hospital, New Orleans, La. New Orleans, La., December 31st, 1921.

I respectfully submit below summary of receipts and disbursements, and on the pages following, comparative statement:

STATE OF LOUISIANA

Office of

Supervisor of Public Accounts
Baton Rouge, La.

March 21, 1922.

To the President and Members Board of Administrators, Charity Hospital, New Orleans, La.

Gentlemen:

This is to certify that the semi-annual examinations made by this office of the books, accounts and vouchers of the Charity Hospital, as kept by the Secretary-Treasurer, Fred W. Matthews, proved that the cash receipts and expenditures of the General and all Special Funds during the calendar year 1921 were as follows:

Cash Balance, January 1st, 1921.....	\$ 22,335.23
Receipts, Jan. 1st to Dec. 31st, 1921.....	622,418.19

Total Balance and Receipts.....	\$644,753.42
Expenditures during same period.....	640,993.25

Cash Balance December 31st, 1921.....	\$ 3,760.17
---------------------------------------	-------------

Of the above balance, \$750.00 was held by the Secretary-Treasurer and \$200.00 by the Sisters, while the balance of \$2,810.17 was on deposit in the Marine Bank & Trust Company.

Yours very truly,

W. N. McFARLAND,
Supervisor of Public Accounts.

REPORT OF THE CHARITY HOSPITAL NEEDLEWORK GUILD.

The Guild had seventy working meetings during 1921, and the gauze dressings made came to the following totals:

Standard	36,405
Laparotomy Sixes	7,599
Perineal Pads	1,297
Amp. Sponges	21,378
Lap. Specials	256
Special Dressings	200
Miscellaneous	3,126
Total	70,261

Fourteen hundred and twenty-seven garments were made, including:

Pajamas	Flannel Nightgowns
Surgeons' Caps	Rompers
Surgeons' Gowns	Baby Slips
Plastic Hose	Dresses
Plastic Sheets	Aprons
Chemises	Blouses
Bloomers	

The Guild also furnished shoes to the amount of \$10.00 a month, to the Social Service workers, and gave an outfit of clothing to an aged woman and a sweater to a boy.

The Treasurer's report for the year shows total receipts of \$1,009.71; disbursements \$596.22, leaving a balance of \$413.49.

We paid rent to the Almshouse of 200 articles, mostly sheets and pillow cases.

The officers for the year were:

Mrs. W. J. Mitchell.....	President
Miss Emma Glenny.....	First Vice President
Miss Edward Moore.....	Second Vice President
Mrs. Harry Howard.....	Third Vice President
Mrs. Reuben Bush.....	Corresponding Secretary
Mrs. J. T. Halsey.....	Recording Secretary
Mrs. Chas. Crawford.....	Treasurer

Committee Chairmen:

Gauze.....	Mrs. Harry Howard
Purchasing.....	Mrs. Brenchley
Garment.....	Mrs. Gould
Publicity.....	Mrs. C. F. Buck, Jr.
Membership.....	Mrs. Ernest Jahncke
Housekeeper.....	Mrs. Elliott
Lunch.....	Mrs. Crawford

MRS. J. T. HALSEY,
Recording Secretary.

Pathological Department

February 14, 1922.

To the Superintendent and Board of Administrators,
Charity Hospital of Louisiana,
New Orleans, La.

Gentlemen:

In submitting my report for the year 1921, I desire primarily to stress the great importance which the Pathological Laboratories have assumed in the activities of the Charity Hospital. The increase of approximately 100% in the number of examinations of all types performed during the year shows to what extent the facilities of the department have been made use of in the scientific diagnosis and treatment of patients.

Such an increase in work has taxed us to the very limit and obliges us to look forward to the time which will very shortly occur when greatly increased facilities, both as to space and equipment, will have to be provided for the department as a whole.

The pathological department has functioned very efficiently in all of its established divisions during the past year. We have been probably somewhat remiss in not having established a complete division of clinical chemistry by now, but we feel that the steps which have been taken with the consent and approval of your body will very shortly provide for a very adequately equipped division which will be able to take care of the ever-increasing demands for chemical examinations.

I desire to thank my staff for its loyal co-operation in my endeavors at properly administering the Pathological Laboratories. To the Superintendent and Board of Administrators of the Charity Hospital I desire to also extend thanks for their hearty support in meeting the administrative problems which ever present themselves.

Respectfully submitted,

CHAS. W. DUVAL, M. D.

DR. W. W. LEAKE, Supt.,
Charity Hospital,
New Orleans.

Dear Doctor:

I have the honor to submit a comparative statement of the work done in the Pathological Department during the years 1920 and 1921.

DIVISION OF CLINICAL MICROSCOPY

Director of Laboratories.

Roentgen Ray Department

New Orleans, February 20, 1922.

The Board of Directors of Charity Hospital, New Orleans.
Gentlemen:

During the past year the X-Ray Department has been completely re-organized, its equipment has been considerably increased and brought up to date, and since last October it occupies its new well-adapted and commodious quarters, with the result that it renders vastly superior service to the Hospital than was formerly possible.

A report on X-ray examinations of emergency cases is made within fifteen minutes of the time that these cases are brought to this department for such examinations.

A Mobile X-Ray Unit has been ordered, and after it arrives the examination of patients too ill or too crippled to be moved and brought to the X-Ray Department will be made at the patient's bedside.

A deep therapy equipment and a sufficient amount of Radium are urgently needed by the therapeutic division of this department, for the proper treatment of the ever-increasing number of certain classes of cancer patients, who at present are deprived of the benefits which they might derive from these latest discoveries.

A photographic division with a well-equipped outfit added to this department would fill a long and much felt want and help in no small measure to make the Hospital Case Records more complete, valuable and interesting.

Attached to and forming part of this report is a detailed statement of the work done in this department during the past year:

Total Number of Patients Examined.....	7,517
Total Number of Exposures.....	11,395
Total Number of Plates Used.....	9,859
Total Number of Fluoroscopic Examinations.....	957

Report of the Hay-Fever and Asthma Clinic

New Orleans, March 14, 1922.

DR. WM. W. LEAKE, Superintendent,
Charity Hospital,
New Orleans.

Dear Dr. Leake:

With a view of increasing the efficiency of our immunizing treatment in the Hay-fever and Asthma Clinic, a series of diagnostic tests with new varieties of pollen proteins have been made during the past year in order to determine the

CONTRIBUTORY CAUSES OF HAY-FEVER.

In the vernal form of hay-fever, for instance, if the patient reacts strongly to the pollen of the grasses, which is common in the atmosphere in Louisiana during the spring, this shows that this is probably the principal cause of his hay-fever. If his attacks diminish, but do not discontinue, in spite of a course of immunizing treatment resulting in a negative test for the grass pollen protein, this does not indicate that the immunizing treatment was unsuccessful, as the contrary is shown by the negative test, but that the patient is sensitive to other atmospheric pollens, that are present in the air at the same time as the grass pollens.

A uniform series of tests of the various pollens found in the air of this section, as demonstrated by our atmospheric pollen test plates, which are constantly kept exposed at our Laboratory as a check on the clinical data of the Clinic, has shown that the most common contributory cause in the three principal types of hay-fever, viz., the spring, fall and perennial, are the pollens of plants that we have segregated into the Chenopodiaceæ Group.

CHENOPODIACEÆ GROUP.

The most common plants of this group are the members of the amaranth, chenopod and dock families, which are both numerous in their varieties, and general in their geographical distribution, over 50 of each having been described, most of them being typical hay-fever weeds and wind-pollinated.

The members of the Amaranth (*Amaranthaceæ*), Chenopod (*Chenopodiaceæ*) and dock (*Rumex*) generate pollens which are smooth and spherical and having a general resemblance to one another. They are easily distinguished from the pollens of the ragweed by their appearance, and from the pollen of the grasses by their different reaction to the Lugol solution. All the varieties tested give an active hay-fever reaction and, with few exceptions, persons susceptible to one species react also to the other members of the group.

The Chenopodiaceæ is a large family which includes, in addition to the true chenopods, several other varieties, such as the Orache (*Atriplex*), the Grease-weeds (*Sarcobatus*), and the Russian Thistle (*Salsola*), which while an important factor in hay-fever in other sections of the United States, are uncommon in this State. The most common representative of this family here is the common wormwood, *Chenopodium Ambrosioides*, whose pollen gives an active hay-fever reaction. It forms a complicating factor in the fall hay-fever.

The branch of the Amaranthaceæ family, which has several members of interest in hay-fever, are the *Acnidas* or Water-Hemp. Some of these, as the Western Water-Hemp (*Acnida tamarascina*) generate a large amount of pollen. Most of them are limited to swamps and moist lands, and they are very common in the suburbs of New Orleans. This pollen also complicates the fall type of hay-fever. The reaction is similar to

Fig. 2. Ovoid pollen of Barnyard Grass, *Panicum crus-galli*. x 500 diam. The grasses pollens are the principal causes of spring hay fever in Louisiana.

Fig. 5. Pollen of spiny amaranth, *Amaranthus spinosus*. x 500 diam. Representative of the Chenopidaceæ Group.

Fig. 6. Pollen of Common Ragweed, *Ambrosia elatior*. x 500 diam., on Atmospheric pollen plate.

that of the amaranths, docks and chenopods, which they also resemble in the general appearance of the pollen.

The most troublesome member of this group here is the Curly Dock, *Rumex crispus*, both on account of its prevalence and the long period of its florescences, which occurs in succession from early spring to late fall. It is thus a complicated factor in both the spring and fall hay-fever, and may be the principal cause of the perennial form.

The similarity of the amaranths, chenopodiums, water-hemp and docks, both as regards the character of their hay-fever reaction and the individual susceptibility to these pollens, demonstrate a similarity in their protein. The practical application, therefore, is that a pollen extract of any of these pollens will be applicable to all the members of this group. We have been fortunate in having the pollen protein extract of the group prepared for us during the past season by H. K. Mulford & Company, of Glenolyn, Pa., and we have used this successfully both for testing and immunizing purposes.

Some of the most common pollen, which we have tested for their relation to hay-fever in this section, are shown in the accompanying illustrations, which are reproductions of photo-micrographs made in our Laboratory.

MULTIPLE POLLEN INFECTION.

An analysis of the cases treated in our clinic during the past year shows that over one-half presented a reaction to the chenopod group sufficiently marked to be considered a potential etiologic factor in their attacks of hay-fever or asthma.

Specifically, the reactions were as follows: In the spring-summer hay-fever, 52 per cent; fall hay-fever, 65 per cent; spring-summer-fall hay-fever, 71 per cent; and in the perennial hay-fever, 52 per cent.

The deciding factor in the question of the additional immunization of such cases is the locality of the patient's residence or place of business. The pollens of the chenopod group do not infest the air in a uniform manner, as, for instance, in the case of the ragweeds. The pollen of the latter we found on our test plates exposed on the tower of the Hibernia Bank Building, and the number per square yard differed but little from those on plates exposed near the ground and in the residential section of the city. The reason for this is that the pollens of the chenopod group are not as numerous nor as buoyant as that of the ragweed, so that in one section of the city the percentage may be relatively higher, and low or entirely absent in another locality on account of the variation in the weed areas.

IMMUNIZING TREATMENT OF MULTIPLE INFECTION.

In carrying out the immunizing treatment, whenever the patient does not show sufficient benefit from the injections of the pollen extract of the principal group or groups to which he shows a positive reaction, the treatment is continued with the extract of the pollen which was found a contributory cause, the most common being those of the chenopod group. This method is responsible for the increase in the percentage of improvements and seasonal cures in our clinic during the past year.

The use of the chenopod pollen extract in hay-fever, which is now being extensively used in various sections of the United States, originated in the Hay-fever Clinic of the Charity Hospital.

Cordially yours,

WM. SCHEPPEGRELL, M. D.,
Chief of Clinic.

N. F. THIBERGE, M. D.,
Visiting Surgeon.

Report of the Directress of Nurses

To the Board of Administrators of Charity Hospital of Louisiana,
New Orleans, La.

Gentlemen:

This report marks the twenty-seventh year in the history of the Training School. Six hundred nurses have graduated since its inauguration in 1894.

The past year has been completed by the School with its customary program. It has been a constant struggle to provide for the continuous nursing care of the sick of the Hospital, owing to the small nursing body, whilst the obligation of instructing the student nurse theoretically has been fulfilled.

The activities in the Nurses' Home consist of class room work, practical demonstration and, in addition to these, the various social functions of normal student life. Class instruction has maintained its standard, while the interest of the lecturing staff of the hospital promises even more efficient teaching.

The continued congested condition of the hospital, the more extensive development of scientific work, the use of wards for teaching purposes, all render the nursing care increasingly heavy. This condition has demanded supplementing the nursing staff by a greater number of orderlies and ward helpers, with an additional cost to the institution.

The generous policy of the Board and other hospital authorities in giving every consideration to the student nurse in return for her service to the Hospital, has been rewarded by a marked increase in the nursing body. The Hospital now provides the student nurse with text books and school uniform. The hours of night duty have been reduced by relieving each nurse for two hours.

We gladly note the improvements made in the Nurses' Home. The floors in the nurses' rooms have been furnished with linoleum and varnished. A small laundry with electrical appliances has been arranged for the use of the nurses so as to make surroundings more homelike. The nurses have access to the Diet Kitchen, where they may make candy and enjoy other refreshments. An inner player piano has been added to our parlors and is being used by anyone who can operate it. The screening of the entire building has just been completed.

We take advantage of this occasion to call your attention to the imperative needs of the Training School. The nurses' quarters should be enlarged. Owing to the limited space we were obliged to reject desirable applicants. The nurses of the night corps are compelled to occupy the Nurses' Infirmary for rest hours and this deprives the school of a regular Nurses' Infirmary. We are anxious to secure books for the Nurses' Library, as the present library is very incomplete. Additional book cases are required and we should be supplied with the recent medical books and current magazines. The furniture in the nurses' rooms is very antiquated and most of it is in bad condition. We would suggest that several swings be purchased for the Nurses' Recreation Grounds to attract out-door life when off duty. Another great need of the Training School is a small laboratory in the Nurses' Home for the chemistry and bacteriology classes. Some of these classes have been held in the General Laboratory, but the nurses cannot get sufficient individual instruction without interrupting the routine work of the doctors. We anticipate making our plans possible through an increased appropriation.

The general health of the school remains quite normal in spite of the pressing demand for service. The student body is worthy of praise for its generosity and devotedness to the sick and for its loyalty to the school.

We cannot close this report without expressing the regret of this Training School at the loss of Sister Martha as Superintendent of Nurses after seven years of service. Sister has done much toward raising the standard of the school and has had the respect of all who worked with her.

In the summary of the year's work, there stands out emphatically the fact that its success has been due to the co-operation and assistance of Hospital authorities. Without their co-operation our efforts would have been a failure.

We avail ourselves of this opportunity to express our sincere gratitude to Dr. Leake for his generous appreciation of our efforts and to return our grateful thanks to the House Officers. It is our earnest desire to co-operate with the Board in every possible way. We express the hope that the interest of the past may be retained so that in the coming year a better record of service and accomplishment may be made.

INFECTIVE DISEASES—Continued.															
Erysipelas of Leg	16	1	17	10		10	4		4				2	1	3
Erysipelas of Neck	1		1				1		1						
Furunculosis	18	3	21	4	2	6	9	1	10	2		2	3		3
Pyæmia	1	2	3										1	2	3
Septicæmia (not Puerperal)		1	1											1	1
Syphilis: Gumma of Buttock		1	1					1	1						
Gumma of Forearm		1	1					1	1						
Gumma of Kidney		1	1					1	1						
Gumma of Leg		1	1					1	1						
Gumma of Thigh		2	2					2	2						
Syphilis, Acquired, Ordinary Forms	176	330	506	2	4	6	117	249	366	52	65	117	5	12	17
Syphilis, Congenital	33	20	53	1	1	2	21	10	31	6	1	7	5	8	13
Tetanus	20	27	47	3	6	9	5	5	10	2		2	10	16	26
Tuberculosis (Surgical conditions)															
Tuberculosis, Abscess of Soft Parts	1	2	3					2	2	1		1			
Tuberculosis of Bones, Joints and Tendons	14	28	42	1		1	7	14	21	5	11	16	1	3	4
Tuberculosis of Hip (Special)	17	14	31	1	1	2	13	8	21	3	3	6		2	2
Tuberculosis of Bladder		1	1								1	1			
Tuberculosis of Intestines	1	1	2							1	1	2			
Tuberculosis of Kidney	1		1												
Tuberculosis of Lymphatics	6	27	33	2	1	3	3	21	24	1	3	4		2	2
Tuberculosis of Ovary and Tube		1	1					1	1						
Tuberculosis of Pancreas		1	1											1	1
Tuberculosis of Peritoneum		1	1					1	1						

Tuberculosis of Rectum	1	1	1						1	1			
Tuberculosis of Testicle	1	1	2					1	1	1	1		
INJURIES—													
Amputation, Traumatic, Arm	1	1	2							1	1	1	1
Amputation, Traumatic, Fingers	1	3	4				1	3	4				
Amputation, Traumatic, Feet	2		2				1		1			1	1
Amputation, Traumatic, Forearm	2	1	3	1	1	2	1		1				
Amputation, Traumatic, Hand	2		2	1		1	1		1				
Amputation, Traumatic, One Leg	3	7	10	1	2	3	1	1	2			1	4
Amputation, Traumatic, Both Legs	1	2	3									1	2
Amputation, Traumatic, Thigh	1		1				1		1				
Amputation, Traumatic, Toes		3	3					3	3				
Injuries, Multiple, Automobile	2	3	5				1	1	2	1	1	2	2
Injuries, Multiple, by Fall	2		2									2	2
Injuries, Multiple, Crushed by Piling	1		1								1		1
Injuries, Multiple, by Machinery	1	1	2						1		1	1	1
Injuries, Multiple, by Railroad	6	1	7				1		1			5	1
Contusion, of Abdomen	15	11	26	6	3	9	7	7	14	2	2	1	1
Contusion, of Arm	1	5	6				1	4	5		1		
Contusion, About Ankle	2		2	1		1	1		1				
Contusion, of Back	23	24	47	1	2	3	20	14	34	2	8	10	
Contusion, of Body	17	7	24	8	3	11	7	3	10		1	1	2
Contusion, of Buttock	1		1				1		1				
Contusion, of Face	14	8	22	2		2	11	6	17	1	2	3	
Contusion, of Foot	4	6	10	1	2	3	2	4	6	1		1	
Contusion, of Forearm	1	1	2				1	1	2				
Contusion, About Hip	6	7	13				5	4	9	1	3	4	
Contusion, of Jaw	1	1	2	1	1	2							
Contusion, About Knee	7	10	17	2	1	3	3	7	10	2	1	3	1
Contusion, of Leg	12	14	26	3	3	6	8	9	17	1	2	3	
Contusion, Multiple	10	3	13	2		2	6	2	8	2	1	3	
Contusion, of Neck	3	2	5				3	2	5				
Contusion, of Nose	2		2				2		2				
Contusion, of Pelvis		1	1					1	1				

†Two of gas gangrene.

In Memorium

JOHN PONDER.

Whereas, Mr. John Ponder, a faithful employee, who actively served this institution for more than fifty years, departed this life on the 17th day of December, 1921, and

Whereas, it was our pleasure and privilege to have known him during our entire incumbency as members of this Board, and

Whereas, during that entire period we found him zealous in his attention to the duties of his office; frank, open and unequivocal in his attitude towards his associates and fellow-employees of this institution; broad, fair and liberal in his actions and amiable and social in conduct towards his fellow-men, and

Whereas, his strength of character and strong personality has endeared him to us, now be it therefore

Resolved, That this Board feels a deep sorrow and personal loss at his demise and that the Charity Hospital has lost an efficient, painstaking and able employee. Be it further

Resolved, That we extend to his bereaved family our deepest sympathy and condolence.
